SKY SOCCER

RED OR BLUE MACAW - WHICH SIDE ARE YOU ON?

In the new animated adventure RIO 2, Blu suddenly finds himself at the centre of a dramatic Sky Soccer match with the red macaws. The pressure is on to show off his soccer skills and do his friends and family proud, but playing soccer in the sky is much harder than it seems. Can you score a goal in this paper version of Sky Soccer?

With a friend, pick a side - red or blue - and a different color pen, then follow these rules: The grid is a soccer field, with a blue and red goal either side. The circle in the middle is the soccer ball. Take turns to move the ball diagonally across one square and draw a line in your color to mark the move. Your opponent has to pick up from where the ball is and move it diagonally across another square to make their move. If you move the ball to a point it has already been, you get another go and can go horizontally or vertically. If you touch the wall of the field, you also get another go, and can move horizontally from it, but not vertically up or down the wall. Importantly, you can't go over lines that have already been drawn, and the winner is the first to get to their opponent's goal.
